Sub : Integration of RTMS with Central Server Software in-line with CPCB Guidelines.

In order to provide better services to the industries and hassle free operations, the M.P. Pollution Control Board (MPPCB) is deploying a customized Central Server Software (CSS) for Online Continuous Real-Time Data Acquisition for the monitoring of emission, ambient air, effluent quality and live view of industries through IP-PTZ cameras in the State. This CSS has been developed for effective monitoring to meet the protocols of Real-time Monitoring Systems (RTMS) connectivity and data transmission as per guidelines of Central Pollution Control Board. The work for integration of industries with CSS-MPPCB through IoT based DAS has been awarded to M/s Knowledge Lens Pvt. Ltd., Bangaluru. It has provision for simultaneous Multi-server data transmission from each station without intermediate PC or plant server.

You already have installed RTMS at your industry premises and the data is accessible at MPPCB on real-time basis through Cloud or other services at present. It is also presumed that the RTMS/analysers at your plant are as per CPCB guidelines. Now, with the deployment of CSS at MPPCB, you are requested to connect RTMS installed at your industry with newly deployed CSS platform for transmission of data. It is also requested to provide the diagnostics of analysers installed at your plant, analyzer internal configuration as well as the internal protocols and registers to the MPPCB for remote check of instrument and to ensure reliability of data.

In case of any queries or assistance, the industry may contact on the following support nodes :
